

Purpose

To support the body's natural production of glutathione.

Positioning Statement

MaxOne™ provides the most advanced glutathione support you can find—anywhere.

General Description

Glutathione is an antioxidant that is produced and found in every cell of our body. It is the body's master antioxidant and chief cell protector against free radicals and oxidative stress, which has been associated with more than 74 major diseases and disorders. Among the critical roles it fills, glutathione protects us from harmful toxins in the environment by acting as one of the body's primary detoxifiers. It strengthens the immune system, fights intracellular inflammation, supports increased exercise, and slows the aging process. Clearly, glutathione is an essential part of living a healthy life.

The Evolution of Glutathione Support. Over 100 years ago the Wright brothers made the first successful airplane flight. They were able to discover the science behind something so ground breaking that it has literally changed the course of history. But has air travel stayed the same? Of course not. It has improved and evolved to the point where air travel, for the most part, is convenient, fast, and economical. Aviation technology has evolved over time and improved with continued research and development.

Just as aviation has evolved, the science supporting glutathione has evolved since it was first discovered and studied in the late 1800s. Max International today leads the industry in the research, development and distribution of glutathione supporting products. Max has continued to research glutathione in order to improve the efficiency and efficacy of the products we develop. MaxOne represents the evolution of glutathione support and the absolute cutting edge of what science has to offer.

MaxOne, powered by exclusive RiboCeine™ technology, is the most effective way to help your cells produce glutathione on demand. One of the challenges of helping the body produce glutathione is in providing cysteine to the cell, a fragile component necessary for the production of glutathione, but often found in limited supply in the body. Supplementing orally with raw cysteine, or whole glutathione for that matter, is not practical because it would be destroyed in the digestion process before reaching the cell. RiboCeine solves these challenges by effectively protecting and delivering the fragile cysteine molecule, enabling the cells to produce glutathione when your cells need it most.

Unique Attributes

- MaxOne protects and delivers the essential building blocks of glutathione to the cell better than any other product available.
- MaxOne features RiboCeine, which has been shown to be 300% more effective than NAC (N-acetyl-L-cysteine) in raising liver glutathione levels.†
- Based on 25 years of research
- Supported by 17 peer-reviewed articles

Product Benefits

Increased glutathione has the following benefits:

- Strengthens the immune system*
- Fights intracellular inflammation*
- Supports increased exercise*
- Slows the aging process*
- Protects individual cells from free radical damage*
- Acts as the body's primary detoxification mechanism*

Directions for Use

Take one capsule twice daily with water, one capsule in the morning and one capsule in the afternoon.

Guarantee/ Warning

This product has been manufactured in the USA in strict conformance with industry standards. Purity and potency guaranteed. Store in a cool, dry place.

Warning: Keep out of the reach of children. This product is for adult use only. It is not intended for use by young children, pregnant women, or nursing mothers.

Nutrition Facts

Supplement Facts		
Serving Size 1 capsule		
Servings per container 60		
	Amount per Serving	% Daily Value
RiboCeine (D-Ribose-L-Cysteine)	125 mg	*†
* Percent Daily Values based on a 2,000 calorie diet		
† Daily Value Not Established		

Other Ingredients: Microcrystalline cellulose, vegetable capsules, stearic acid (kosher, vegan, non-GMO), silicon dioxide.

† Study performed in a liver cell system.
 *These statements have not been evaluated by the Food and Drug Administration.
 This product is not intended to diagnose, treat, cure or prevent any disease.

FAQs

How is MaxOne different from MaxGXL®?

A- MaxOne™ utilizes Max International's proprietary RiboCeine™ formulation, which Dr. Herb Nagasawa developed based on 25 years of research. RiboCeine is shown to be 300% more effective than NAC (N-acetyl-L-cysteine) in raising liver glutathione levels.† It doesn't change the fact that MaxGXL is still a great product that has produced amazing results for many people, but simply put, MaxOne represents an evolution in glutathione support. Featuring RiboCeine, MaxOne is a superior way to deliver cysteine; the key to supporting glutathione production within the body.

How does MaxOne support glutathione production in the body?

A- MaxOne features RiboCeine, which effectively protects and delivers cysteine to the cell, enabling your body to produce glutathione more efficiently. Cysteine is a critical element needed to produce glutathione and is often in short supply in the body. On its own, cysteine is easily broken down during digestion. RiboCeine ensures that cysteine reaches the cell intact—available for glutathione production.

Why don't I have to take as many capsules as MaxGXL?

A- Since RiboCeine is so effective and efficient at raising glutathione levels, MaxOne can provide the same benefit in 1/3 the volume of MaxGXL.

What are the "other" ingredients?

A- As demonstrated on the supplement facts panel, RiboCeine is the only active ingredient in MaxOne. The other ingredients listed are common, inert, and safe ingredients used to assist the RiboCeine raw material flow properly as part of the manufacturing/ packaging process.

Can these capsules withstand extreme temperature variations?

A- As always, we suggest that you store MaxOne in a cool, dry place to ensure maximum product effectiveness and integrity.

Can I take MaxOne with other Max products?

A- MaxOne is designed to work synergistically with other Max products and can be taken together.
